

# MAGAZINE APPLICATION

## Why to choose this design?

Over the years you'll notice a change in the design world, while minimalist design has been around for awhile, there has been a revival in the art community.

Minimalist design is taking over because it just works.

The style is simple enough that users don't have to think much about it. (Even though it requires a lot of thought and planning from designers to create something so simple.)

Minimalism is about returning to the basics, it offers us a clean and timeless look with simplicity, a solid use of white space allowing room for the design to breathe and getting the message across to a diverse audience.

It's no wonder why we love it so much. If you're looking to rebrand your business, create a new website, or simple letterhead, minimalism is the way.

# Layout Sample

## NEWS FOR OUT TIME

Personalized for any interest

Get Started

### How it's made?

The complete layout is build using the adobe Illustrator. I will explain the way of building the layout by dividing the layout into it's child modules.

- Background

The background is implemented by cropping a random background and intersecting it at all the edges of the screen. The default screen size taken is that of iPhone 7 (750x1334 px). The background is only covering half the screen.

- Zig Zag shapes on the background

The zig zag shapes are implemented purely using the rectangle tool on the background applied.

- Get Started Button

The Get started button is made using the rectangle tool along with the border curves of 6px to give the button a border radius. Apart from this, there is text box in the center of the button.
